

(n-dimensional) Space

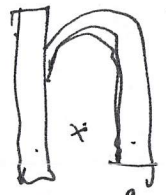

In multi-dimensional Designspaces every axis influences every other axis.

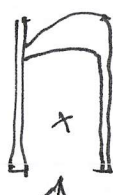

It is easier to split influence, e.g., by making "catalog" axes, that hold groups of shapes together with only a limited set of working axes.

Primary axes

XOPQ

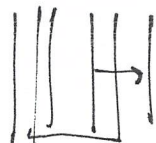

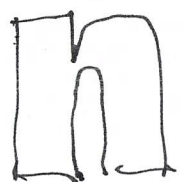

XTRA

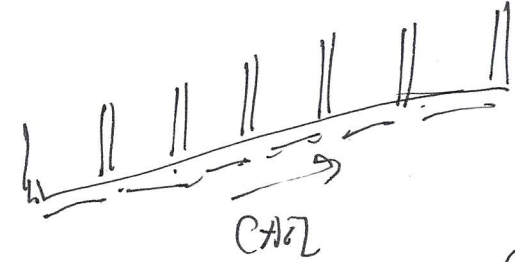

stems same counters change.

stems change counter stay the same

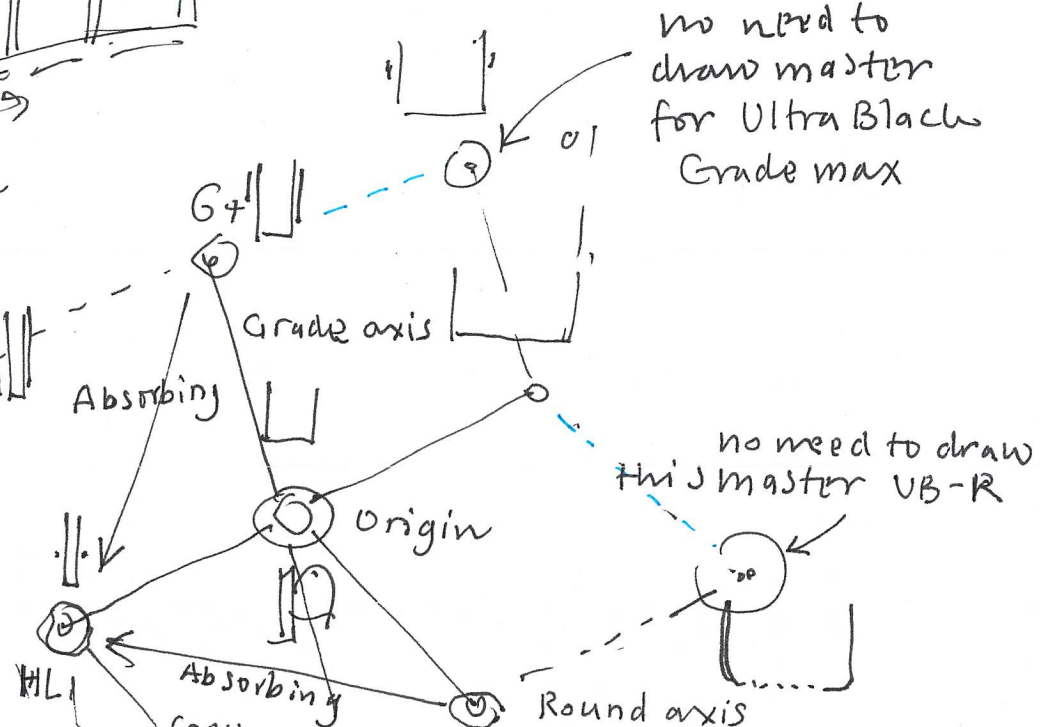

weight

"right" changes both weight and width.

Notes on Design Spaces

no need to draw master for Ultra Black Grade max

no need to draw this master UB-R

Hairline master "absorbing" behavior of other axes, by using the same master on multiple locations

Hairline master make other axes "disappear"
